### National Emission Standards Update: Are You Still Compliant?

In July of 2022, the EPA finalized amendments to the National Emission Standards for Hazardous Air Pollutants (NESHAP) for Major Sources: Industrial, Commercial, and Institutional Boilers and Process Heaters, commonly known as the “Boiler MACT”.

Those who thought they had a margin with the previous standards may not have as much now or they could be out of compliance which could lead to non-compliance in the future.

### Strong ESP Performance Starts from Within

If your precipitator isn't working as well as it should, the very first place to troubleshoot is inside. Plates, discharge electrodes (wires) and other internal components are the bones of the precipitator, and if they're not installed or maintained properly, you will have performance issues.
